

Quite simply **tiptel 114**

The tiptel 114 is a compact telephone for use in places where there is not normally space for a telephone. For example, it is ideal for use in a production department, in the health care sector (e.g. hospitals) or in the retail sector (e.g. at a supermarket checkout). It is also popular since it can easily be fixed to the wall.

The tiptel 114 is very easy to use with a keypad built into the handset.

By pressing the Redial key once you can redial the last number called.

During a call, it is possible to mute the microphone – very convenient, if you want to talk to your colleagues and do not want to be overheard by your correspondent. If the tiptel 114 is

connected behind a telephone exchange, you can transfer calls. To end one call and make another, you do not have to hang up the handset first. Simply press the switch that is close to the earpiece. Thanks to the ring tone, you can, of course, hear incoming calls but they can be displayed (via the call signal) on the optical display on the handset. When the telephone is connected to an exchange, the ring tone differs depending on whether it is an internal or external call. The handset is also fitted with an induction coil and, therefore, is ideal for persons with hearing difficulties using an audio phone.

- Keypad built into the handset
- Optical indication of incoming calls
- Activation and deactivation of the microphone during a call
- Last number redial
- Fitted with an induction coil for the convenience of hearing aid users
- Can be wall mounted
